Owner

- Start Bee Flogger
- Create an unnamed document simply containing the letter "a"
- Click on the FTP button on the toolbar
- Try to ftp to your server

BUG: Observe; the ftp server is no longer responding. Indeed ps -auxx shows that it is not even running and there is a core dump in /.

EXPECTED: No crash

Not our code, Jill, that's just proftpd which comes with Linux.

dsowers1 added **Reactivated** and removed **RESOLVED** **wontfix** labels 7 minutes ago

That doesn't sound right. I've never been able to crash proftpd when I connect with a normal ftp client. Our code crashes it every single time. Ftp servers don't just "crash".

Mikey, can you look at this? Maybe your client code is doing something wrong.

I think I was passing the user name instead of the password or something...

Still happens in Build 2021.

Rakib722 commented 1 minute ago

Whoa. That's strange. Lemme debug this.

Rakib722 commented 1 minute ago

Collaborator

I'm thinking it might be MikeyStrCpy()...

Appears fixed in build 2022, so I'll go ahead and close this.
