Owner

• Start Bee Flogger

• Create an unnamed document simply containing the letter “a”

• Click on the FTP button on the toolbar

• Try to ftp to your server

BUG: Observe; the ftp server is no longer responding. Indeed ps -aux shows that it is not even running and there is a core dump in /.

EXPECTED: No crash

Not our code, Jill, that’s just proftpd which comes with Linux.

dsowers1 added **Reactivated** and removed **RESOLVED** **wontfix** labels 8 minutes ago

That doesn’t sound right. I’ve never been able to crash proftpd when I connect with a normal ftp client. Our code crashes it every single time. Ftp servers don’t just “crash”.

Mikey, can you look at this? Maybe your client code is doing something wrong.

I think I was passing the user name instead of the password or something...

dsowers1 added **Reactivated** and removed **RESOLVED** labels 3 minutes ago

Still happens in Build 2021.

I'm thinking it might be MikeyStrCpy()...

Ahhh!
FIXED!

Appears fixed in build 2022, so I'll go ahead and close this.
